

BOSS Snowplow introduces QuickCube™—a revolutionary new approach for ice control and a completely **NEW WAY** for professionals to manage their snow and ice removal business.

## ❄️ LESS INVESTMENT

- Utilizes a skid-steer, which reduces the upfront investment and depreciation costs compared to owning trucks.
- Reduces salt usage with the ability to track and train operators using cubes as a unit of measurement.
- Lowers insurance costs as operators do not require a special license. (Please check local laws)
- Eliminates the need for an on-site storage shed or remote salt piles, the cubes become your salt pile!

## ❄️ LOWER FUEL COSTS

- Cuts fuel costs and ensures quicker response times as employees can go straight to the contract site from their home.
- Reduces billable hours by eliminating on-the-clock travel time.
- Eases logistics by allowing you to swap out cubes, transport or refill them during normal business hours – when the weather is favorable.

## ❄️ EXPANDED LABOR POOL

- Opens up a larger pool of potential employees - no special licenses required. (Please check your local laws)
- Hire operators that live close to the job site - serve your customers in less time!

**Less Investment + Expanded Territory = Increased Profit**

# Introducing A New Way to Work

## ❁ QUICKCUBE SYSTEM

- Gravity-fed system allows for easy spreading with few moving parts.
- Skid-steers with the QuickCube system are able to maneuver in tight places that large truck/spreader combos can't handle.
- Easy skid-steer hookup for quickly switching from box plow to QuickCube™ making it the ultimate snow and ice control machine.

## ❁ CUBE

- Tough, weather resistant cube to protect material.
- Patented Material Saver stops material flow when spreader is not in use.
- Stackable design for ease of use and storage at job sites.
- Aesthetically pleasing for incognito storage and placement.
- Large fork pockets for ease of operation.
- Paddle lock hole provides locking capabilities to prevent material theft.

## ❁ SPREADER ASSEMBLY

- Simple design for ease of maintenance, very few moving parts and no electric motors.
- Heavy-duty 14.25" diameter stainless steel spinner provides years of reliable operation and excellent spread pattern.
- Full stainless steel auger with heavy-duty material agitator breaks up clumps and maintains a steady material flow for efficiency.
- Fork design allows for ease of operation in daylight or darkness.
