Reelmaster® 5010-H

The Reelmaster 5010-H gives you the power and performance you want with the fuel efficiency and reliability you need. Through its patented PowerMatch™ system, the Reelmaster 5010-H utilizes the power of a diesel engine in combination with a battery pack to supply over 40 horsepower, but only when conditions require. Electric motors on the cutting units, which feature low-drag seals and low-friction bearings, improve performance and reduce power requirements. The result is increased fuel efficiency, quieter operation, significantly fewer potential leak points and unmatched quality of cut.

Reelmaster® 7000-D

The Reelmaster 7000-D is a multi-use, heavy-duty reel mower designed for productivity and performance in the most extreme fairway and rough conditions. We started with patented DPA cutting units that manicure your turf and save you time with easy set-up and long-lasting adjustments. Then, we added a 55 horsepower (41 kW) Yanmar® diesel engine, high-torque reel motors, and the SmartCool® auto-reversing fan system so southern grasses and high heat don't stand a chance. Finally, we combined it all with a whopping 126" (320 cm) width-of-cut! This mower has it all – power, productivity, and superior aftercut appearance. By the way, it's also an overseeding monster!

Workman® UTX Series

The Workman UTX is a straightforward, no-nonsense, 4-wheel drive utility vehicle built to stand up to the toughest tests without compromising performance. With standard commercial-grade components, the highest payload in its class, and a proprietary speed control system, it's designed for the rigors of a long work week, not a few hours of recreation on the weekends. The Workman UTX has the muscle to blast through snowdrifts while still maintaining the ability to regulate speed and sound in sensitive areas. To raise the standard further, every Workman UTX features an integrated plow mount, power steering, turn signals, brake lights, and a spray-on bed liner.

ProCore® 648s

The ProCore 648s builds on the tremendous legacy of the ProCore 648 by incorporating proven technology and even more innovative features while preserving the time tested design elements that changed the way you aerate. Revised controls improve ergonomics and allow single handed operation. Hole spacing and true tine depth are now set and saved in the InfoCenter.™

The onboard controller is continuously monitoring key operating parameters to improve after aeration turf condition and allow the operator to easily target coring head drop and raise. A tighter turning radius with reduced wheel scrubbing and the ability to easily increase speed during turns increases productivity. Proven reliability, improved performance and exciting innovation - that's what makes the ProCore 648s the new superior choice.

FieldClean™ 580

Regular cleaning of synthetic turf is necessary to keep playing surfaces draining properly, in optimal playing condition and maximize their useful life. The Bullseye FieldClean 580 utilizes a row of spring tines that first loosen infill materials, embedded debris, hair and other fine materials up to a depth of 1" (2.5 cm). A highly effective, counter-rotating synthetic brush then lifts the debris and top layer of infill material from the turf and onto the adjustable angle vibrating sieve, allowing infill material to return to the field surface while debris, dust and hair are collected. The rear brush re-incorporates the infill material and leaves a freshly groomed surface.

AccuraSeed™ 620

The AccuraSeed 620 plants grass seed directly into the ground, providing outstanding seed-to-soil contact and unmatched germination. The simple, yet effective twin discs open a slit for seed placement allowing for multiple passes without disrupting dormant or winter damaged surfaces. The large capacity hopper with windows to monitor seed level allows for less frequent refills, resulting in greater productivity. A proven seed size adjustment and metering design allows the machine to provide an infinite range of seeding rates with all seed types, from very large to the very smallest of seed varieties.

RapidSeed™ 430/590

The Bullseye RapidSeed 430 and 590 are ideal for sports fields and golf courses where economy and random seed dispersement is important. Both RapidSeed overseeding machines offer the same accurate means to produce thousands of holes, deliver the seed and brush in, all with a single machine. Available in two widths, there is a unit for tighter, more undulating areas or larger areas. The spikes are conical-shaped, so more seed actually drops into the holes. The seeds drop when the side wheel turns, so there is no spillage of seed when the machine is not in operation. An optional replacement rear spiked roller can be added to double the number of holes per pass. The optional hydraulic lift wheel kit allows the seeder to be towed behind even a Workman® HDX and provides improved ground-following ability.

RotaQuake™ 630

The Bullseye RotaQuake 630 is an aerator that decompacts the soil using a set of rotating steel blades. The RotaQuake can work at depths up to 10" (25.4 cm) with minimal to no surface disruption to keep your turf ready for play. The rear roller smooths surface behind rotating blades and the integrated legs make unhooking and storage easy.

NuSurface™ 470/790

The Bullseye NuSurface 470 & 790 are used to fraise mow, flail mow, level, de-thatch, and renovate turf areas, as well as harvest sprigs. These products are ideal for use on golf courses and sports fields and are quickly becoming the go-to grass removal tool for fast and efficient resurfacing projects. It's rotary action removes material and transfers it onto a conveyor system for disposal, leaving behind a smooth surface, immediately ready for sod or seeding. These machines are highly productive and can be adjusted in small increments for the desired level of aggressiveness.
