

Sharp Blades

ENSURE BEST PERFORMANCE

KEEPING SHARP EDGES HELPS TO ...

- Promote growth of healthy grass
- Optimize cutting unit performance
- Extend the life of the mower
- Allow the equipment to run most efficiently with fewer adjustments needed
- Provide the best possible after-cut appearance for the turf

SHARPENING TIPS

How do you know if sharpening is needed?

- Does not cut 2 sheets of Toro paper (Part #125-5610) when set up with light contact
- The grass is not cut cleanly
- The grass is off color, dull or it may have brown tips
- Streaks of uncut grass appear
- Stragglers left

This profile drawing of the blades shows the result of wear. The leading edges are rounded and the angle of the bedknife has worn to match the circle created by the blade path. Rounded edges on the reel blades and bedknife will cause the grass blades to be pinched and torn rather than sheared off cleanly.

EdgeSeries™ REELS

GENUINE TORO® PARTS

The Next Generation of Cutting Performance

Toro® DPA cutting units have earned a reputation for outstanding performance. Now EdgeSeries™ replacement reels take that performance to the next level. Available for Toro riding and walk Greensmaster® and Reelmaster® mowers, EdgeSeries Reels are designed for longer life with less maintenance — all while delivering a phenomenal quality of cut.

MAKING THE BEST BETTER

EdgeSeries™ Reels **30% TO 50% LONGER LIFE**

IMPROVED AFTER-CUT APPEARANCE

The forward-swept design has an improved helix and blade angle, offering a very precise cut for the full width of the bedknife-to-reel contact. Geometry changes also improve grass collection, so fewer clippings fall onto the green.

LESS MAINTENANCE

Better edge retention means there's less grinding, less backlapping and less maintenance involved. Less maintenance means lower labor costs and lower cost of ownership.

LONGER LIFE

Each EdgeSeries Reel features tough reel blade material that holds an edge longer. These cutting units can offer as much as 30 to 50 percent longer life than the previous design, which helps reduce replacement costs and simplifies maintenance.

TURF HEALTH

Without a properly sharpened reel and bedknife, quality of cut will deteriorate. This can cause tip dieback, which not only turns the turf brown, but may also introduce disease. EdgeSeries replacement reels retain their edge longer for a crisp, clean cut.

BEST PRACTICES FOR MAINTAINING YOUR REEL

- **Check bedknife-to-reel contact** daily and adjust as appropriate to maintain light contact.
- **Inspect edges** to see if they are dull, nicked or bent.
- **Do regular backlapping** to maintain sharpness between grindings.
- **Use relief grinding** to reduce abrasive wear between reel blades and bedknife.
- **For best results** Toro recommends replacing reels at the same interval to maintain highest quality of cut.
