

# IRRIGATION 101: MAKING YOUR SPRINKLING SYSTEM SMARTER

New technologies are making watering your lawn and landscape even easier. Just like home automation products make life inside the home a little more convenient, smart technology is making your yard and other outdoor living maintenance tasks simple and more efficient. These advances can also be big time and money savers!

Two smart products from Toro integrate your outdoor maintenance and beautification tools with smart technology, giving you the ability to control these features from your phone, tablet or computer.

Toro's SMRT Logic<sup>®</sup> is an internet gateway that provides on-demand access to your sprinkler controller, outdoor lighting and other landscape features. Simple to set up and easy-to-use, SMART Logic plugs into any internet modem or router, then connects to the web on its own.

SMRT Logic Gateway

Once connected, SMRT Logic® communicates with select Toro® and Irritrol® irrigation controllers, Unique Lighting Systems® outdoor lighting, fountains, ponds, outdoor music systems and other landscape features. Any 120V-powered indoor or outdoor device with a wireless auxiliary relay can be connected.

SMRT Logic's proprietary 900 MHz radio signal provides better range and reliability than other Wi-Fi and Bluetooth® platforms currently on the market. It's also incredibly secure. With industry standard encryption, SMRT Logic is not dependent on your home or business Wi-Fi network and is virtually invisible to would-be data thieves.

Once SMRT Logic is connected, it's time to set up an account at [SMRTSCAPE.com](http://SMRTSCAPE.com). This easy-to-use, flexible program allows you to use and manage your outdoor features through the SMRTSCAPE mobile app and website.

With SMRTSCAPE, you can easily control all your outdoor features from your phone, tablet or computer. The program allows you add multiple users to your account, add images for specific locations, develop custom names for stations and create lighting scenes.

"SMRTSCAPE's dashboard is easy to configure and very intuitive to use," said Alexis Deasy, senior marketing communication manager for Toro Irrigation and Lighting. "The days of running outside to manage your sprinkler controller or outdoor lighting are over. You can control the system from anywhere, giving you the flexibility to manage your watering, lighting and other outdoor features in the most efficient way."

Are you ready for a smart landscape? Visit [Toro.com](http://Toro.com) to learn more.
