

Outdoor Lighting Should Be Part of Your Customer's Home Automation

Bringing It All Together With SMRT Logic®

UNIQUE
LIGHTING SYSTEMS®

Lighting system control from a mobile device, tablet, web browser or computer virtually anywhere, anytime!

As technology evolves in the landscaping and lighting industries, automation is becoming a useful tool homeowners can use to help make their outdoor space even easier to manage. If you're looking for an application to use with your clients, SMRT Logic is a great option.

"People are looking for ways to make their life easier and more efficient, and incorporating technology and automation is a great way to do that," said Alexis Deasy, marketing communications manager for Unique Lighting Systems®. "Giving homeowners the capability to manage their landscape lighting with the tap of a finger or the click of a mouse gives them the most optimal option for taking care of their outdoor spaces and keeping their home bright and beautiful."

That's what SMRT Logic can provide. It is on-demand landscape access from anywhere in the world, giving people the power to manage their lighting solutions from their phone, tablet or computer. Whether home or away, people will be able to keep their outdoor spaces beautifully lit. If someone on vacation wants to change the cadence of their outdoor lighting schedule, they don't have to wait until they are home. Or maybe a homeowner is snuggled in their house for the evening but forgot to turn on their outdoor lighting, they can make the switch without emerging from their cozy inside spot.

Using SMRT Logic to offer outdoor lighting to customers will provide an opportunity to increase long term home value, beautify the home, increase curb appeal and even extend usable space to a property.

Plus, it can be a great way to further customize and enhance each home's individual beauty. If homeowners want special themes for holidays, celebrations, special occasions or to set a certain mood, SMRT Logic can be set for all that. It then can automatically return to everyday lighting themes.

SMRT Logic is simple to setup. It connects to the internet on its own, with a plug and play installation. It also has up to three times the range of typical wi-fi, giving it more flexibility and reliability. Plus, SMRT Logic is secure, being invisible to would-be hackers and thieves, and is versatile as it pairs with optional Auxiliary Relays to control outdoor landscape features and is compatible with Amazon® Alexa™ or Google Home™ devices.
