UNIQUE
LIGHTING SYSTEMS®

system catalog

Beauty, Security, Value.

The Art of Light

Nothing beautifies your home more than exterior lighting. The purpose of low voltage lighting is to unify the relationship between your house and the landscaping that surrounds it. Few things will impact your home's curb appeal more than a quality lighting design.

Advancements in LED lighting have made your choices even more attractive and add long term value to your property.

Landscape lighting will dramatically enhance your home and extend your living spaces to include the outdoor environment, providing your home with extended space and visual interest.

When designing exterior lighting, take into account your personal style and adapt your exterior environment to evoke a particular mood or place that is soothing to you. Even modest homes or those with limited yards can benefit from landscape lighting.

"Our clients are thrilled with the lighting so far, and all I can say is the last four projects which we brought you in on for consulting were a huge success. Additionally, the training sessions which you conducted in our office for our staff was excellent.

We rely on businesses like Unique Lighting to help us to develop a level of professionalism throughout our industry and in the eyes of the public.

Additionally, the excellent customer service we have received by you has been stellar. As a result of your customer service and the quality of the product, we have made the professional decision to strictly install Unique Lighting Systems in all of our projects whenever possible."

~ Sunrise Gardens Inc.

Security and Safe Passage

As our outdoor living areas continue to evolve, so does lighting design. For entertainment spaces that now include outdoor barbeque areas, relaxation lounges, multi-level decks, pool and spa areas; safe passage lighting is more important than ever before. While homeowners may know their way around, guests may have difficulty.

Combine form and function by making your home or business safer and more beautiful. Area lighting, step lighting and downlighting should be considered to provide safe passage for each individual design.

A well-lit property will deter potential intruders by illuminating and providing visibility in all areas. Perimeter and security lighting are made easy with the addition of products like SMRT Logic®, which provides wireless and mobile control.

Long Term Value

You have a substantial investment in your property and a professional landscaping will enhance your long term investment. Realtors often say the first impression is everything and the first impression of a well illuminated property can add to the value of your home.

Unique Lighting Systems offers a lifetime warranty on many of our products and, with our solid brass product line you never need to worry about corrosion or the paint chipping off during routine maintenance. Other materials simply will not withstand abusive and corrosive outdoor environments.

The Art of Design

Many different techniques will create a variety of effects for your home and property. The overall effect is dependent on what you would like the end result to be. Whether it is the imposing dramatic effect on the left or a subtle and elegant look on the right, your lighting professional will create the atmosphere you desire. Keep in mind that several fixtures focused on an area from multiple angles can highlight an object with a softer light than a single very bright fixture. Below are just a few of the techniques used to illuminate a property.
STEP LIGHTING
VOYAGER • LONDONER
Designed for safety, step lighting will clearly illuminate the steps designed into a space, providing easy walking paths and directional assistance.

MOON LIGHTING
QUASAR • PROBE-OSM
In the garden, moonlighting can be used to create the shadowing patterns of a moonlit night. Moonlighting is a subtle and natural effect, often using cool bluish LED lamps to create the look of natural moonlight.

HARDSCAPE LIGHTING
GEMINI • ISO
Hardscape lighting enhances the colors and shapes of hardscape areas being lit. Most commonly illuminated areas are block walls, seating areas or barbeques.

SUBMERSIBLE
HYDRO • ATLANTIS 16
Water features add a eye-catching design to the landscape. When illuminated properly their effect can be intensified. When illuminated with cool white LED lamps the water sparkles and acquatic plants and animals are brightly highlighted.

AREA LIGHTING
MERCURY • CENTAURUS
Area lighting is used to enhance flower beds and also safely illuminate pathways. Area lights are often staggered and alternating from one side to another when used on a pathway.

GRAZING
APOLLO STAR • NOVA
Grazing is used to highlight and enhance interesting textures and architectural elements. Fixtures are placed less than a foot from a vertical surface and provide vertical illumination.

DOWN LIGHTING
LUNAR • CRUSADER
Downlighting illuminates an object or surface from above. Downlighting can be used to highlight specific garden elements and functional areas. It is also used for illuminating large spaces for safety, security or recreation.

UP LIGHTING
BIG BANG • BISHOP
Architectural and landscape elements become visually dramatic features when illuminated from below. Up lighting is the most common technique used to accent key focal points in the landscape and to create shadows on walls.

WALL WASHING
STARBURST • STELLAR
Wall washing is the effect of illuminating an entire surface evenly to create a beautiful and subtle glow. Illuminating the front face of a home evenly provides an elegant appeal.

Landscape Lighting Design Assistance Program
Specifically for Landscape Contractors

Designed to help "Lighten Your Workload", the Landscape Lighting Design Assistance Program, offers complimentary CAD drawing services to assist lighting professionals in creating distinctive, attractive and intuitive landscape lighting plans.

Complimentary Lighting Design Services

We'll help you create a comprehensive landscape lighting design and fixture layout plan.

Lighting Design Details & Specifications

Installation details and written specifications are available for all design packages.

Your Designs Will Include:

• A detailed fixture layout plan
• Comprehensive wiring design
• Transformer sizing recommendations

landscape lighting plan
LED FLEX-FIT™

Unique Lighting Systems' fixtures are packed with high quality features including a fully adjustable vertical tilt to 270 degrees, a full orbital rotation of 360 degrees, 25-foot lead wire and more. To make these popular fixtures even better, Unique Lighting has added the *LED FLEX-FIT™* feature that secures the lamp to eliminate retention and centering issues. Traditional fixtures can experience misdirected beam spread or fixture disassembly caused by the fixture spring tension forcing the lamp against the lens surface. *LED FLEX-FIT™* ensures that the lamp stays in place within the fixture and provides reliable, consistent beam direction. This innovative feature also eliminates the need for stainless lens retainers, springs and socket retainers.

HUB Wiring System

The HUB Wiring Method is the ultimate In-Line fuse protected wiring system and the future of landscape lighting wiring. Unique includes a replaceable 20 and 10 amp fuse at the point of connection allowing you to size the fuse according to load or wire size, thus making troubleshooting accessible, convenient and fast. The Satellite HUB includes three barrel lugs with lithium greased caps and an In-Line 5,10, & 20 amp fuse. The dark brown housing blends discreetly for above or below ground installation.

Benefits of a HUB System

• Central location for connections
• Protects connections from moisture
• Reduces number of connections
• Flexibility in fixture location and future system expansion
• Distributes proper voltage evenly to each fixture

UNIQUE
LIGHTING SYSTEMS®

How The System Works

Fixtures

HUB

Homerun Wire

Fixture Wire Leads - 25' Standard

1

From Fixtures

From Transformer
Feed homerun and fixture wires through HUB.

2
Ribbed Wires

Connect all ribbed fixture wires to the ribbed homerun wire. Insert all wire joins into provided grease cap.

3
with writing

Connect homerun wire with writing to one side of fuse link (except for FHUB).

4
with writing

Connect fixture wires with writing to other side of fuse link. Select and install proper fuse to match fixture load.

5
Insert all wire joins into provided grease cap. Thread on cap.

6

UNIQUE LIGHTING
Push wires into HUB body. Install lid. Use paint pen to label hub and transformer number.

The HUB Wiring System is the ultimate In-Line fuse protected wiring system. Allowing you to size the fuse according to load or wire size, thus making troubleshooting accessible, convenient and fast.   You wouldn't purchase a home or an automobile without fuse protection…an outdoor lighting system warrants the same respect!

Wiring Methods

See The Difference!
Advantages

• Secondary fuse for protection included at the HUB
• Only need to check voltage at the hub vs. every fixture
• One point of connection per home run
• Connections protected in direct burial enclosure
• Equal voltage to every lamp

5 Fixture Example
YES!

3 CONNECTIONS

EASY TROUBLE SHOOTING

SAVES TIME

FUSED TO LOAD

---

6 CONNECTIONS + **NOT FUSED** + **MORE TIME** = **PRONE TO FAILURE**

The "T" Method   NO!
Disadvantages

• Difficult to troubleshoot
• Short wire lead does not allow for final adjustment of lighting portrait
• Does not equalize voltage to all lamps on the run

---

10 CONNECTIONS + **NOT FUSED** + **MORE TIME** = **PRONE TO FAILURE**

The Daisy Chain Method   NO!
Disadvantages

• Difficult to troubleshoot
• Short wire lead does not allow for final adjustment of lighting portrait
• Does not equalize voltage to all lamps on the run

---

10 CONNECTIONS + **NOT FUSED** + **MORE TIME** = **PRONE TO FAILURE**
The Loop Method   NO!
Disadvantages

• Difficult to troubleshoot
• Short wire lead does not allow for final adjustment of lighting portrait
• Does not equalize voltage to all lamps on the run
• You **MUST** match the polarity or you can cause bodily harm or damage to the circuit
• Wastes a lot of wire completing the loop

17

Take It To The Next Level!
The Intelli-HUB Method
Advantages

- 18/2 - 25' wire lead on each fixture
- Secondary fuse for protection included at the HUB
- Only need to check voltage at the hub vs. every fixture
- One point of connection per home run
- Connections protected in direct burial enclosure
- Equal voltage to every lamp

25 Fixture System Example

Most Unique Lighting Systems® fixtures come standard with a 25' wire lead.

Why A HUB System?

Wire connections are the weakest point of any low voltage installation and are susceptible to wicking and water infiltration. Utilizing the HUB installation method will reduce the number of connections by up to 80% versus standard wiring methods. This means less maintenance, less lamp outages and easier troubleshooting. In addition the HUB method utilizes less wire and saves money.

- Each HUB acts as a central location for connections, taking the guess work out of troubleshooting
- Protect connections from moisture to minimize wicking and corrosion
- Reduce the number of connection points, wire and labor
- Distribute proper voltage evenly to every fixture
- Flexibility in fixture location and future expansion

HUB Housing

FEATURES & BENEFITS
- Brown ABS housing easily hides in the landscape
- Impact resistant so it holds up to the abuse of landscaping
- Snap-in lid makes access for expansion or maintenance easy
- Compact size is perfect for planters

Fuse Link

FEATURES & BENEFITS
- 20 Amp rated gives you the ability to fuse to the load
- Water resistant design protects in damp locations
- 8" 10AWG wire leads
- Protects wire from damage that may occur in the yard

Direct Burial Connections

FEATURES & BENEFITS
- Solid brass barrel lugs for lasting durable connections
- Pre-greased black wire caps to protect connections from moisture
- Solid mechanical connections ensures the life and performance of the HUB

Enough Power To Do The Job

Unique Lighting Systems' highest commitment is to set the standard for manufacturing, innovation and quality products. All Unique™ transformers up to 1120 watts are engineered with solid copper core windings and the highest quality materials. Our high quality materials and precision grain-oriented steel laminations combine for an energy efficient product with very low no-load amps. We utilize dual layer insulation between the primary and secondary winding. As an industry leader, we specify all the materials including laminations, copper wire, surface area of the wire and more.

Benefits of the Unique Transformer

- Solid copper core windings made of the highest quality materials*
- Limited Lifetime Warranty on Pro-Force and Direct Burial models
- Energy efficient with minimal no-load amps
- Insulated primary and secondary
- Precision grain-oriented steel laminations are interlocked and varnish impregnated

* Not including 60 Watt LED model.

UNIQUE
LIGHTING SYSTEMS®

Specifications & Features

Core
Engineered single core design with precision grain-oriented steel laminations. High temperature glass-impregnated nylon bobbin and solid copper mag. wire. To ensure robust construction, each output tap is soldered to the mag wire for optimum connectivity.

Construction
304 stainless steel (complies with NEMA 3R).

Primary Protection
One 25A breaker for 300W
Two 25A breakers for 600W

Power Cord
Unit must be hardwired.

Electrical Requirements
Available power ratings 300 and 600 Watts.
Primary voltage is 120 volts, secondary voltage varies from 12V-24V outputs.

Output Terminal
Tinned 6061-T6 aluminum lug strip with 3mm hex set screw for a positive torque connection. Includes 3mm hex key tool with every transformer.

Auto LED Work Light
LED work light will illuminate when the transformer door is open, and turn off when door is closed, allowing easy installation in low-light conditions.

Finish
Stainless Steel finish is standard. Unique Lighting's Weathered Brass finish is a "living finish" and will naturally patina and change over time.

Warranty
Limited lifetime warranty against manufacturer's defects.

Dimensions
Height: 13.5" (342.9 mm)
Width: 8" (203.2 mm)
Depth: 8" (203.2 mm)

Standard Finish
SS - Stainless Steel

Standard Finish
WB - Weathered Brass

Specifications & Features

Core
Engineered single core design with precision grain-oriented steel laminations. High temperature glass-impregnated nylon bobbin and solid copper mag wire. To ensure robust construction each output tap is soldered to the mag wire for optimum connectivity.

Construction
Durable UV resistant composite box. Suitable for direct burial. Agency approval as "SUITABLE FOR GROUND MOUNTED RECESSED."

Primary Protection
Replaceable 3AG Time Delay (glass slow-blow fuse)

Power Cord
Unit must be hardwired

Electrical Requirements
Available power ratings 310, 360, 500, 600, 840 and 1120 Watts. Primary voltage is 120 volts, secondary voltage varies from 12V-22V output. See individual models for exact output leads.

Output Terminal
Each DB includes ready to wire color coded 10 gauge output wire lead.

Finish
Black UV resistant composite box standard.

Warranty
Limited lifetime warranty against manufacturer's defects.

Odyssey Series Fixtures

The pride of Unique Lighting Systems®, Odyssey Series is the result of years of research, development and determination to create the most elite lighting fixtures available. Experience the marriage of beauty and durability as each Odyssey fixture is built from solid brass and designed to last a lifetime. Odyssey fixtures come with a standard 25' wire lead, brass-threaded slotted stake,and a full array of designer lenses and glare control devices. Coupled with Unique's limited lifetime warranty, the Odyssey line is one of the most dependable and beautiful lighting systems on the market.

Benefits of Odyssey Series

• Premium grade fixtures
• Solid brass construction
• Designer lenses
• 25' wire leads
• Brass-threaded slotted stakes
• Limited lifetime warranty

Knights Series Fixtures

Add a touch of elegance to your outdoor atmosphere with the Knights Line from Unique Lighting Systems®. Made from high quality brass and copper, the Knights line is designed to withstand the test of time and look beautiful while doing it. By fabricating the fixtures from brass and copper, Unique™ has created a long-lasting product that develops an attractive appearance naturally over time. The complex structure of brass and copper changes when exposed to outdoor conditions, bathing the fixture's exterior with a naturally aged look.
Benefits of Knights Series

• Contractor grade fixtures
• Solid brass or copper
• 25' wire leads
• 15 year warrany

Elements Series Fixtures

The Elements™ Series was created for the discerning customer who wants the latest in high-quality lighting at a great value. True to its name, the Elements Series offers a unique blend of materials and an authentic styling to match the natural environment in which it is placed. With installation productivity in mind, most fixtures come standard with a 15 foot wire lead and a one foot *FLEX™* Auxiliary lead. This allows for installation ease and flexibility for future expansion.
Benefits of Elements Series

• Consumer grade fixtures
• A360 Alloy or brass
• *FLEX™* Auxiliary leads for future expansion
• 10 year warranty

Outdoor Living

Outdoor living means just that - living, eating and relaxing outdoors in the fresh air. Indoor and outdoor styles come together to create truly amazing rooms. There is nothing like having architectural elements that allow your indoor living to expand and blend with the outdoor space. Creating a comfortable and well-appointed outdoor living room is considered the next level of luxury in home design. Incorporating relaxing, dining, cooking, and play into the growing outdoor space opens up the scope of outdoor living at home and increases the usable square footage of your house.

Cloud Based Landscape Control

Lighting system control from a mobile device, tablet, web browser or computer virtually anywhere, anytime, regardless of how those devices are connected to the internet (Wi-Fi, Ethernet or Cellular). SMRT Logic® uses a secure Internet Gateway, a dedicated website and an app on your smart device to create an integrated lighting control system. This innovative approach provides complete control of one or more lighting systems from any web browser, computer, iOS® or Android™ device without the need to be "on site". Using the SMRTscape Lighting app (FREE from iTunes and Google Play) you can control outdoor lighting scenes, easily perform maintenance, set the mood for special occasions, operate security and seasonal lighting, control ponds, fountains and more! SMRT Logic has the ability to control irrigation when used with popular irrigation controllers from both Toro® and Irritrol®.

Cloud Based Landscape Control

Cloud based landscape control anytime, anywhere. Use SMRT Logic® with the SMRTscape Lighting mobile app or website to control irrigation, lighting, fountains, security gates, and more...

SCENE 1
Controls all the front yard and facade lighting with two LPCU-A's installed in two separate transformers.

SCENE 2
One LPCU-A contained in a covered outlet box controls the featured main fountain in the front yard.

SCENE 3
Controls driveway and path lighting. Use the Mobile App or Handheld Remote to turn on this scene when unexpectedly arriving home late.

SMRTscape App:
Used with any iOS® or Android ™ mobile device to extend hours, turn on/off scenes and activate emergency "All On" control.

LPLUS Internet Gateway:
Secure Internet Gateway - No Wi-Fi limitations used to set up initial schedule, location and programing via PC or mobile device. Wirelessly communicates with LPCU-A's.

Simple
Simple Plug & Play installation allows the SMRT Logic Gateway to connect to the internet on its own with no need for network permissions or passwords.

Connected
Powered by a proprietary 900MHz radio signal, SMRT Logic communicates to your landscape systems with a level of consistency, distance, and security not seen across competing Wi-Fi and Bluetooth platforms.

Secure
Industry standard encryption coupled with our proprietary radio technology provide secure access and communication between your landscape systems and SMRT Logic.

Compatible
SMRT Logic is backward compatible with select Toro®, Irritrol® and existing Unique Lighting Systems® installations.

Why SMRT Logic® ?
• Wireless control of up to four scenes
• Conveniently used with any iOS® or Android ™ mobile device
• Up to 250 different transformers or devices for each control scene
• Easily retrofits into existing lighting installations
• Compatible with any cord connected 120V device
• Astronomical timing – auto adjusts dusk and dawn times by your location and seasonal changes

Homeowner Benefits
• Create different ambience for different occasions
• Control pathway lighting for easy nighttime entry
• Turn on security lighting at the perimeter of the property at the press of a button
• Automate outdoor living spaces - control fountains, irrigation controllers, seasonal lighting and other outdoor elements
• Compatible with Alexa and Google Home

*iOS is a registered trademark of Cisco in the U.S. and other countries. iTunes is a registered trademark of Apple, Inc. Android and Google Play are trademark of Google, Inc.

LPLUS Internet Gateway

- Astronomical timing – auto adjusts dusk and dawn times by your location and seasonal changes
- Easy zip code entry for location
- Automatically adjusts for Daylight Savings Time
- Firmware upgradable
- Power outage safe – you won't lose your programming
- Secure Internet Gateway - No Wi-Fi Limitations
- Communicates with LPCU-A via proven and dependable RF signal

Power Control Unit

- Compatible with any cord connected 120V device
- Up to 1000 foot line of sight range
- Each LPCU-A also functions as a repeater, assisting with long-range installations
- The LPCU-A comes equipped with an antenna, for added distance or an extra boost for your wireless signal
- Repeater feature creates a mesh network on larger installs

Mobile Device

- FREE iOS®* or Android™* App (App Store and Google Play™)
- Control multiple lighting systems from more than one device
- Compatible with existing Light Logic™ Installations
- Use for lighting, ponds, fountains & more…
- Robust, reliable and upgradable

FLEX GOLD™ Series LED Lamps

Whether you are subtly illuminating an elegant pathway for a desired effect, or reaching for the tree top, *FLEX GOLD™* and *FLEX GOLD™* Vivid Series LED lamps provide the solution.

With our wide range of wattages and beam spreads the *FLEX GOLD™* Vivid Series can fully illuminate any project. Unique Lighting Systems offers the highest wattage lamp in the industry, so nothing is out of reach.

Benefits of *FLEX GOLD™* Series

• Drop-in LED lamps
• Wide range of lamps ranging from Micro T3 to PAR36 lamps
• *FLEX GOLD™* Vivid Series color changing technology
• *FLEX GOLD™* Vivid Series App puts adjustments at your fingertips

UNIQUE
LIGHTING SYSTEMS®

Energy Efficiency & Savings

Are Your LED Lamps Efficient?

The effectiveness of LED products has steadily improved since their introduction as a source for general illumination. This trend is expected to continue thanks to new materials and better manufacturing processes. Currently, the efficacy of LED lamps compares very favorably to conventional light sources. Many integrated LED lamps and LED luminaires have efficacies that are comparable to their traditional counterparts. However, the variability in LED products are changing rapidly. More importantly, efficacy should not be the only factor when comparing products. Other performance characteristics, such as color quality and lumen intensity distribution must be considered in making a decision.

By The Numbers

What is the difference between *FLEX GOLD™* Series LEDs and standard halogen lamps?

"Widespread use of LED lighting has the greatest potential impact on energy savings in the United States." *- LED Section on Energy Savings U.S. Department of Energy, Energy.gov*	35 W Halogen	5 Watt *FLEX GOLD™* LED
Lamp Wattage:	35 W Halogen	5 Watt *FLEX GOLD™* LED
Lifespan of Lamp:	4,000 hrs.	40,000 hrs.
Annual Electrical Cost:	$19.32 per year	$2.76 per year
Lifespan when used for 8 hours a day, 7 days a week	1 year 4 months 13 days	13 years 8 months 11 days
Cost of replacements each year:	$2.92	$0.00
Total annual cost:	$22.24 per year	$ 2.76 per year
Total cost (after 13 years 8 months, 11 days)	$308	$62

Total savings /w LED fixture (ROI): $308 - $62 = $246 Total Savings

Rising Cost Of Electricity

18.98¢ per kilowatt hour

The average cost of electricity rose over 30% between 2002 and 2016

8.44¢ per kilowatt hour

14.5¢

12.5¢

10.5¢

8.5¢

Cost per kilowatt hour - US national average

2002   Year   2016
Data obtained from U.S. Department of Energy, Energy.gov

Longer Life Lamps

Most LED lamps will last up to 10 times longer than standard halogen lamps. With an average lifespan of 40,000+ hours, converting to LEDs will not only increase energy savings, it will significantly reduce material and labor costs by not having to continuously replace frequently burned out halogen bulbs. Retrofit your existing job and create instant energy savings. FLEX GOLD™ Series LEDs are up to 85% more efficient than halogen, resulting in considerable energy savings over the lifespan of the lamp.

Efficacy Versus Energy Use

Efficacy is related to energy efficiency, but it cannot be used to establish energy use. Energy use is the power draw over time, and is typically reported in units of kilowatt-hours (kWh). A less efficacious product may in fact use less energy if it is operated for fewer hours. Control systems such as Unique Lighting's SMRT Logic® system can be an important tool for realizing energy savings over time.

Incandescent, Halogen, Compact Florescent, Linear Florescent, High-Pressure Sodium, Metal Halide, LED

Approximate Efficacy (lm/W) — 0 20 40 60 80 100 120 140 160

"LED is a highly energy efficient lighting technology, and has the potential to fundamentally change the future of lighting in the United States. Residential LEDs use at least 75% less energy, and last 25 times longer, than incandescent lighting."

- LED Section on Energy Savings
U.S. Department of Energy, Energy.gov

It would take 10 halogen lamps to equal the lifespan of 1 *FLEX GOLD™* Series LED lamp.
Why FLEX GOLD™ Series LED?
• 85% less energy usage than halogen
• 13+ year lifespan
• Retrofit for instant savings
• Sustainable
• Thoroughly tested in Unique™ fixtures
• Cool to the touch
• Eco-friendly
• Do not attract bugs
• Reduce your Carbon Footprint

FLEX GOLD™ LEDs

PAR36 - 5W, 7W & 13W

- 5 Watt - Up to 320 Lumen, 10-15V
- 7 Watt - Up to 480 Lumen, 10-15V
- 13 Watt - Up to 840 Lumen, 10-15V
- 40,000 hour rated life
- Rated for outdoor use in an enclosed fixture
- Operating temperature -4° F to 122° F
- Available in Warm White, White and Cool White
- Flood = 32°
- 5 year warranty

MR16 - 3W, 4W, 5W & 8W

- 3 Watt - Up to 200 Lumen, 10-15V
- 4 Watt - Up to 280 Lumen, 10-15V
- 5 Watt - Up to 430 Lumen, 10-15V
- 8 Watt - Up to 600 Lumen, 10-15V
- 40,000 hour rated life
- Rated for outdoor use in an enclosed fixture
- Operating temperature -4° F to 122° F
- Available in Warm White, White and Cool White
- Spot = 20° Flood = 40° Wide Flood = 60°
- 5 year warranty

MR16 - 4W ECO

- 4 Watt - Up to 280 Lumen, 10-15V
- 40,000 hour rated life
- Rated for outdoor use in an enclosed fixture
- Operating temperature -4° F to 122° F
- Available in Warm White
- Flood = 40°
- 3 year warranty

MR11 - 2W

- 2 Watt - Up to 110 Lumen, 10-15V
- 40,000 hour rated life
- Rated for outdoor use in enclosed fixture
- Input voltage 10-15V
- Operating temperature -4℉ to 122℉
- Available in Warm White
- Flood = 40°
- 5 year warranty

T3 - 1W & 2W

- 1 Watt - Up to 100 Lumen
- 2 Watt - Up to 250 Lumen
- 20,000 hour rated life
- Input voltage 10-15V
- Available in Warm White, White and Cool White
- 360° distribution of light
- 2 year warranty

T3 - WR - 2W

- Water Resistant
- 2 Watt - Up to 250 Lumen
- 40,000 hour rated life
- IP65 rated
- Dimmable
- Available for use in open or enclosed fixtures
- Input voltage 10-15V
- Available in Warm White and White
- 360° distribution of light
- 5 year warranty

Micro G4 - 1W

- 1 Watt - Up to 110 Lumen
- 20,000 hour rated life
- Input voltage 10-15V
- Available in Warm White and White
- 360° distribution of light
- 2 year warranty

FLEX GOLD™ LEDs

LAMPS

FLEX GOLD™ VIVID LEDs • Lamps

MR16 - 5W FLEX GOLD™ VIVID
- RGB - 5 Watt dimmable from 10 to 420 lumen
- CCT - 5 Watt dimmable
- 40,000 hour rated life
- Bluetooth, app controlled
- Rated for outdoor use in an enclosed fixture
- Operating temperature -4° F to 122° F
- CCT - Adjustable from 2700K / 6500K
- RGB - 2700K / Red/Green/Blue adjustability
- RGB - 3000K / Red/Green/Blue adjustability
- Flood = 40°
- 5 year warranty

PAR36 - 10W
- 10 Watt - Up to 800 Lumen, 10-15V
- 40,000 hour rated life
- Rated for outdoor use in an enclosed fixture
- Operating temperature -4° F to 122° F
- RGB - 2700K / Red/Green/Blue adjustability
- RGB - 3000K / Red/Green/Blue adjustability
- Spot = 20°, Flood = 40° & Wide Flood = 60°
- Dimmable from 10 to 410 lumen
- 5 year warranty

Beam Spreads
Are You Using The Right Beam Spread?

FLEX GOLD™ LED lamps are offered with 20° to 60° and wider beam widths or view angles. The total volume of light between a 20 degree view angle and 60 degree view angle LED light bulb is the same, but, the concentration of light with narrower 20 degree view angle LED bulbs makes them seem brighter because you see all of it in a smaller space. The wider view angle LED bulbs will appear less bright because the same light volume has been spread wide. There is minimal light spread outside of the stated view angle.

Thinner, longer beam of light ideal for illuminating taller, thinner structures or for focusing light onto certain areas.

20°
Beam Spread

Medium width beam of light ideal for illuminating shorter, medium sized structures or for general accent lighting.

40°
Beam Spread

Wider, shorter beam of light ideal for illuminating wide trees or structures or for focusing light onto certain areas for a wall washing effect.

60°
Beam Spread

Finishes

Please note that all Unique Lighting Systems® fixtures have a "Living Finish," and can be expected to vary in hue over time. Our fixtures come standard with our one-of-a-kind weathered brass finish, natural brass, or natural copper.

Additional colors may be ordered with powder coating options. These colors are subject to additional lead times and will incur a cost premium. A limited warranty applies to all powder coat finishes.

The standard powder coat colors that are offered include:

TT	**VG**	**BK**	**WH**	**TK**
Tucson Tan	Verde Green	Black	White	Titanium Knight

How To Order Standard Powder Coat Colors

All painted products are available only in the non-lamped configuration. To place an order for painted product, chooset the non-lamped fixture and add a – P to the end of the part number. In the description or note area, call out the specific color you want.

Example – Pulsar in Titanium Knight:

PULS-NL-P Titanium Knight

Custom Powder Coat Colors

In addition to our standard colors, we also offer the full array of Cardinal® Paint's extensive line of powder coat colors (www.cardinalpaint.com). If there is a special color you are looking for we can match Pantone® colors or even match a physical sample that you provide.

*Cardinal is a registered trademark of Cardinal Paint and Powder, Inc. Pantone is a registered trademark of Pantone LLC.

Our Commitment

Unique Lighting Systems' highest commitment is to set the standard for manufacturing innovative and quality products. This commitment is evident through our detailed inspection processes and extensive field testing. From the initial design process of each product, to the final assembly of each custom-made individual part, our manufacturing process accomplishes the highest level of performance and durability carried through to final delivery to the end user. Durable construction and beautiful styling make Unique fixtures the ideal solution for any residential or commercial application. Unique Lighting already holds numerous product patents and we are constantly developing innovative ideas to help expand the lighting industry.

The Unique™ Promise • A Full Warranty

Unique Lighting Systems® products have been manufactured under the highest standards of quality and workmanship. All Unique Lighting products are warrantied against manufacturer's defects as listed below.

Transformers – Limited Lifetime Warranty*
Odyssey Series – Limited Lifetime Warranty
Knights Series – 15-Year Warranty**
Elements Series - 10-Year Warranty

For additional details visit www.uniquelighting.com

*LED Series transformers carry a 10 year limited warranty against manufacturer's defects.
**Certain Knights models carry a limited lifetime warranty, please refer to product pages for specific product warranty information.

We reserve the rights to improve our products and make changes in the specifications and designs without notice and without incurring obligation. Products depicted in this brochure are for demonstration purposes only. Actual products offered for sale may vary in design and features.
