Beauty, Security, Value.

The Art of Light

Nothing beautifies your home more than landscape lighting. The purpose of low voltage lighting is to unify the relationship between your house and the landscaping that surrounds it. Few things will impact your home's curb appeal more than a quality lighting design.

Advancements in LED lighting have made your choices even more attractive and add long term value to your property.

Landscape lighting will dramatically enhance your home and extend your living spaces to include the outdoor environment, providing your home with extended space and visual interest.

When designing exterior lighting, take into account your personal style and adapt your exterior environment to evoke a particular mood or place that is soothing to you.

"Our clients are thrilled with the lighting so far, and all I can say is the last four projects which we brought you in on for consulting were a huge success. Additionally, the training sessions which you conducted in our office for our staff was excellent."

"We rely on businesses like Unique Lighting to help us to develop a level of professionalism throughout our industry and in the eyes of the public."

"Additionally, the excellent customer service we have received by you has been stellar. As a result of your customer service and the quality of the product, we have made the professional decision to strictly install Unique Lighting Systems in all of our projects whenever possible."

~ Sunrise Gardens Inc.

Security and Safe Passage

As our outdoor living areas continue to evolve, so does lighting design. For entertainment spaces that now include outdoor barbeque areas, relaxation lounges, multi-level decks, pool and spa areas; safe passage lighting is more important than ever before. While homeowners may know their way around, guests may have difficulty.

Combine form and function by making your home or business safer and more beautiful. Area lighting, step lighting and downlighting should be considered to provide safe passage for each individual design.

A well-lit property will deter potential intruders by illuminating and providing visibility in all areas. Perimeter and security lighting are made easy with the addition of products like SMRT Logic®, which provides wireless and mobile control.

Long Term Value

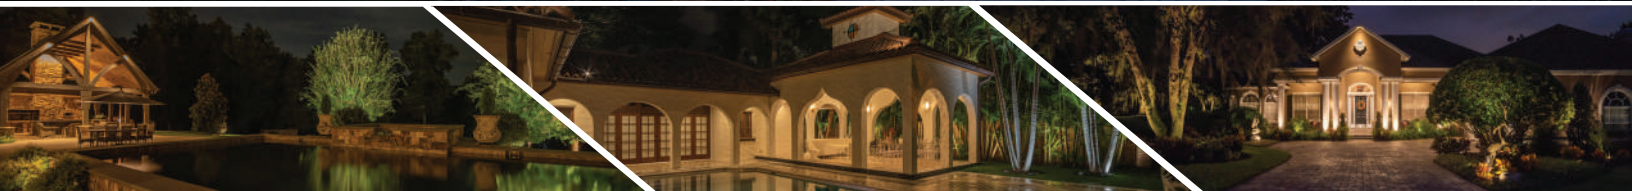

You have a substantial investment in your property and professional landscaping will enhance your long term investment. Realtors often say the first impression is everything and the first impression of a well illuminated property can add to the value of your home.

Unique Lighting Systems offers a lifetime warranty on many of our products and with our solid brass product line you never need to worry about corrosion or the paint chipping off during routine maintenance. Other materials simply will not withstand abusive and corrosive outdoor environments.

The Art of Design

Many different techniques will create a variety of effects for your home and property. The overall effect is dependent on what you would like the end result to be. Whether it is the imposing dramatic effect on the left or a subtle and elegant look on the right, your lighting professional will create the atmosphere you desire. Keep in mind that several fixtures focused on an area from multiple angles can highlight an object with a softer light than a single very bright fixture. Below are just a few of the techniques used to illuminate a property.

STEP LIGHTING

VOYAGER • SOVEREIGN

Designed for safety, step lighting will clearly illuminate the steps designed into a space, providing easy walking paths and directional assistance.

MOON LIGHTING

QUASAR • PROBE-OSM

In the garden, moonlighting can be used to create the shadowing patterns of a moonlit night. Moonlighting is a subtle and natural effect, often using cool bluish LED lamps to create the look of natural moonlight.

HARDSCAPE LIGHTING

GEMINI • ISO

Hardscape lighting enhances the colors and shapes of hardscape areas being lit. Most commonly illuminated areas are block walls, seating areas or barbecues.

SUBMERSIBLE

HYDRO • ATLANTIS 16

Water features add a eye-catching design to the landscape. When illuminated properly their effect can be intensified. When illuminated with cool white LED lamps the water sparkles and aquatic plants and animals are brightly highlighted.

AREA LIGHTING

MERCURY • CENTAURUS

Area lighting is used to enhance flower beds and also safely illuminate pathways. Area lights are often staggered and alternating from one side to another when used on a pathway.

GRAZING

APOLLO STAR • NOVA

Grazing is used to highlight and enhance interesting textures and architectural elements. Fixtures are placed less than a foot from a vertical surface and provide vertical illumination.

DOWN LIGHTING

LUNAR • CRUSADER

Downlighting illuminates an object or surface from above. Downlighting can be used to highlight specific garden elements and functional areas. It is also used for illuminating large spaces for safety, security or recreation.

UP LIGHTING

BIG BANG • PULSAR

Architectural and landscape elements become visually dramatic features when illuminated from below. Up lighting is the most common technique used to accent key focal points in the landscape and to create shadows on walls.

WALL WASHING

STARBURST • STELLAR

Wall washing is the effect of illuminating an entire surface evenly to create a beautiful and subtle glow. Illuminating the front face of a home evenly provides an elegant appeal.

Specification & Design Support Program (SDSP) Specifically for Landscape Contractors

Designed to help "Lighten Your Workload", the Specification & Design Support Program, offers complimentary CAD drawing services to assist lighting professionals in creating distinctive, attractive and intuitive landscape lighting plans.

Complimentary Lighting Design Services

We'll help you create a comprehensive landscape lighting design and fixture layout plan.

Lighting Design Details & Specifications

Installation details and written specifications are available for all design packages.

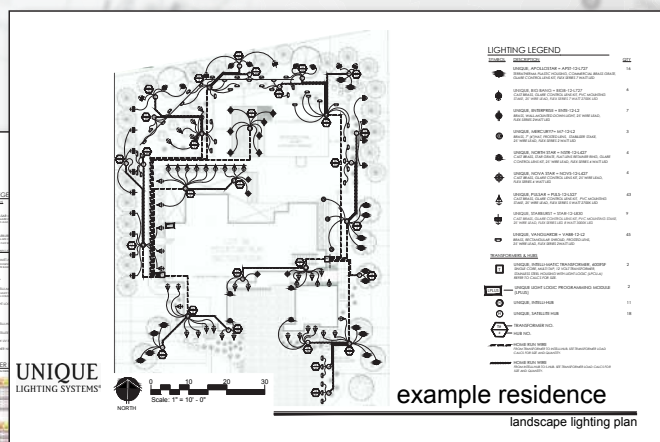

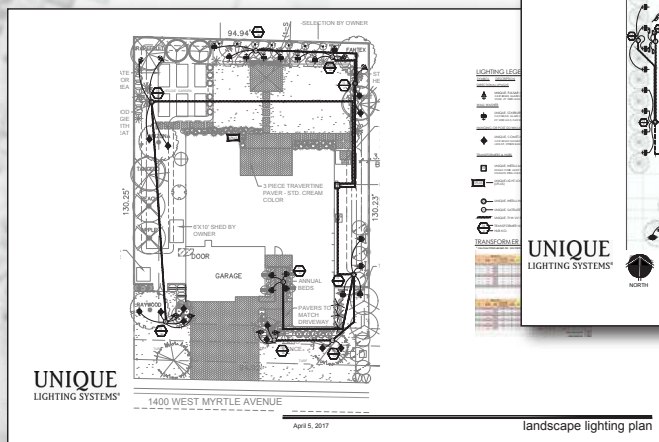

Your Designs Will Include:

- A detailed fixture layout plan
- Comprehensive wiring design
- Transformer sizing recommendations

Submit your plan today at: sdsp@uniquelighting.com

www.uniquelighting.com/design-services

**LED
FLEX-FIT™**

LED FLEX-FIT™

Unique Lighting Systems' fixtures are packed with high quality features including a fully adjustable vertical tilt to 270 degrees, a full orbital rotation of 360 degrees, 25-foot lead wire and more. To make these popular fixtures even better, Unique Lighting™ has added the **LED FLEX-FIT™** feature that secures the lamp to eliminate retention and centering issues. Traditional fixtures can experience misdirected beam spread or fixture disassembly caused by the fixture spring tension forcing the lamp against the lens surface. **LED FLEX-FIT™** ensures that the lamp stays in place within the fixture and provides reliable, consistent beam direction. This innovative feature also eliminates the need for stainless lens retainers, springs and socket retainers.

HUB Wiring System

The HUB Wiring Method is the ultimate In-Line fuse protected wiring system. Unique Lighting Systems includes a replaceable 20 and 10 amp fuse at the point of connection allowing you to size the fuse according to load or wire size, thus making troubleshooting accessible, convenient and fast. The Satellite HUB includes three barrel lugs with lithium greased caps and an In-Line 5, 10, & 20 amp fuse. The dark brown housing blends discreetly for above or below ground installation.

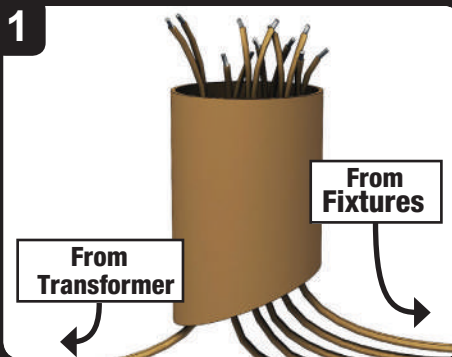

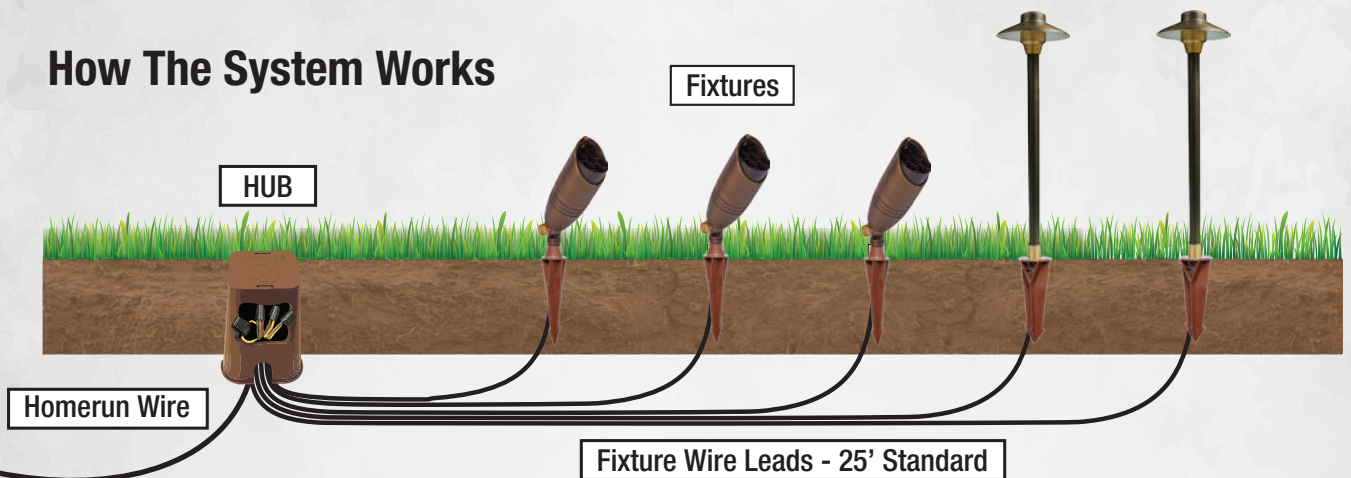

Benefits of a HUB System

- Central location for connections
- Protects connections from moisture
- Reduces number of connections
- Flexibility in fixture location and future system expansion
- Distributes proper voltage evenly to each fixture

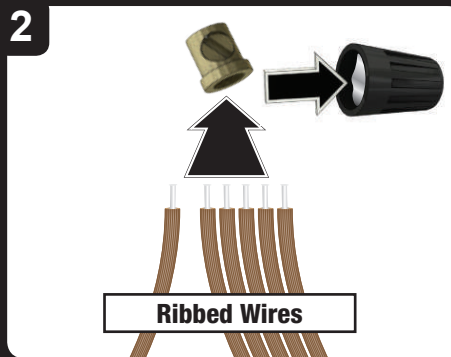

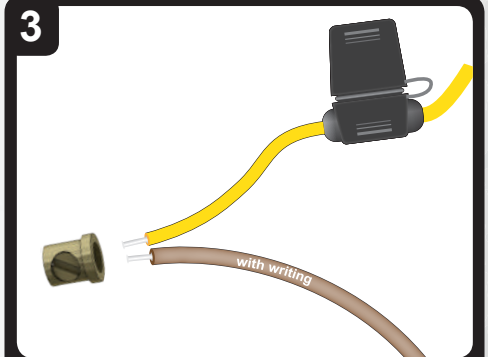

How The System Works

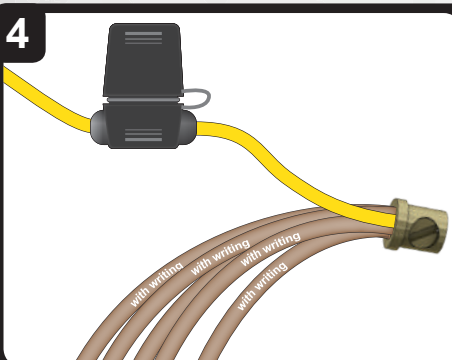

Feed homerun and fixture wires through HUB.

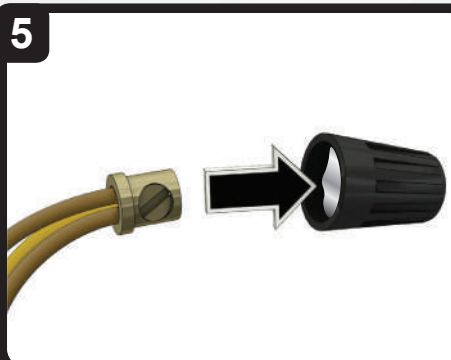

Connect all ribbed fixture wires to the ribbed homerun wire. Insert all wire joins into provided grease cap.

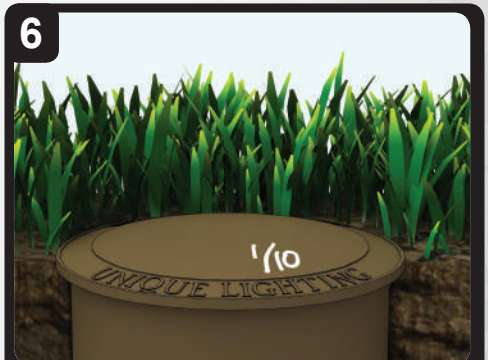

Connect homerun wire with writing to one side of fuse link (except for FHUB).

Connect fixture wires with writing to other side of fuse link. Select and install proper fuse to match fixture load.

Insert all wire joins into provided grease cap. Thread on cap.

Push wires into HUB body. Install lid. Use paint pen to label hub and transformer number.

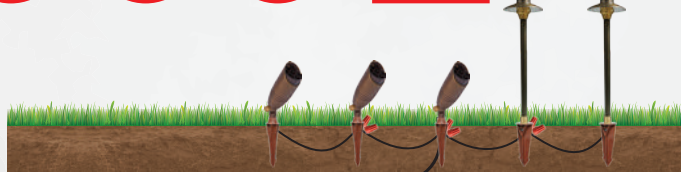

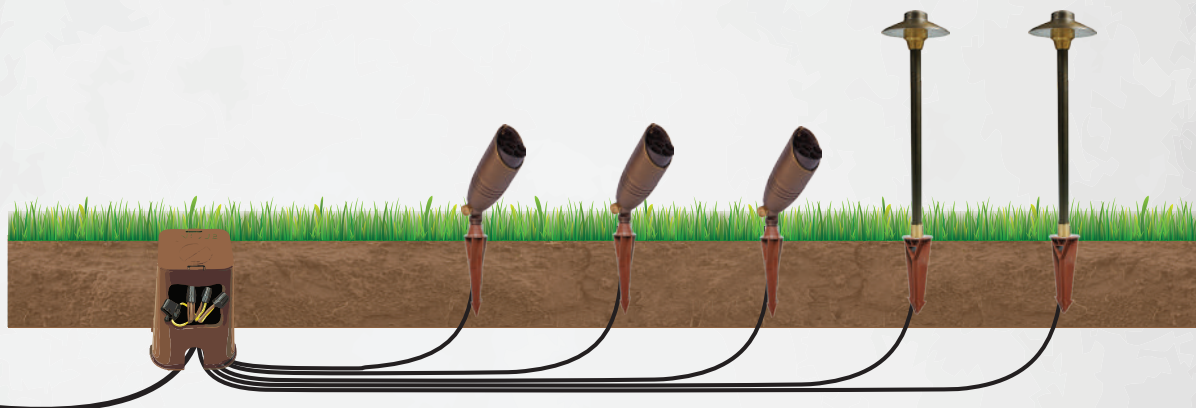

The HUB Wiring System is the ultimate In-Line fuse protected wiring system. Allowing you to size the fuse according to load or wire size, thus making troubleshooting accessible, convenient and fast. You wouldn't purchase a home or an automobile without fuse protection...an outdoor lighting system warrants the same respect!

See The Difference! Advantages

- Secondary fuse for protection included at the HUB
- Only need to check voltage at the hub vs. every fixture
- One point of connection per home run
- Connections protected in direct burial enclosure
- Equal voltage to every lamp

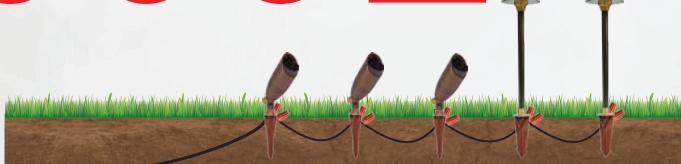

5 Fixture Example

The "T" Method Disadvantages

- Difficult to troubleshoot
- Short wire lead does not allow for final adjustment of lighting portrait
- Does not equalize voltage to all lamps on the run

The Daisy Chain Method Disadvantages

- Difficult to troubleshoot
- Short wire lead does not allow for final adjustment of lighting portrait
- Does not equalize voltage to all lamps on the run

The Loop Method Disadvantages

- Difficult to troubleshoot
- Short wire lead does not allow for final adjustment of lighting portrait
- Does not equalize voltage to all lamps on the run
- You **MUST** match the polarity or you can cause bodily harm or damage to the circuit
- Wastes a lot of wire completing the loop

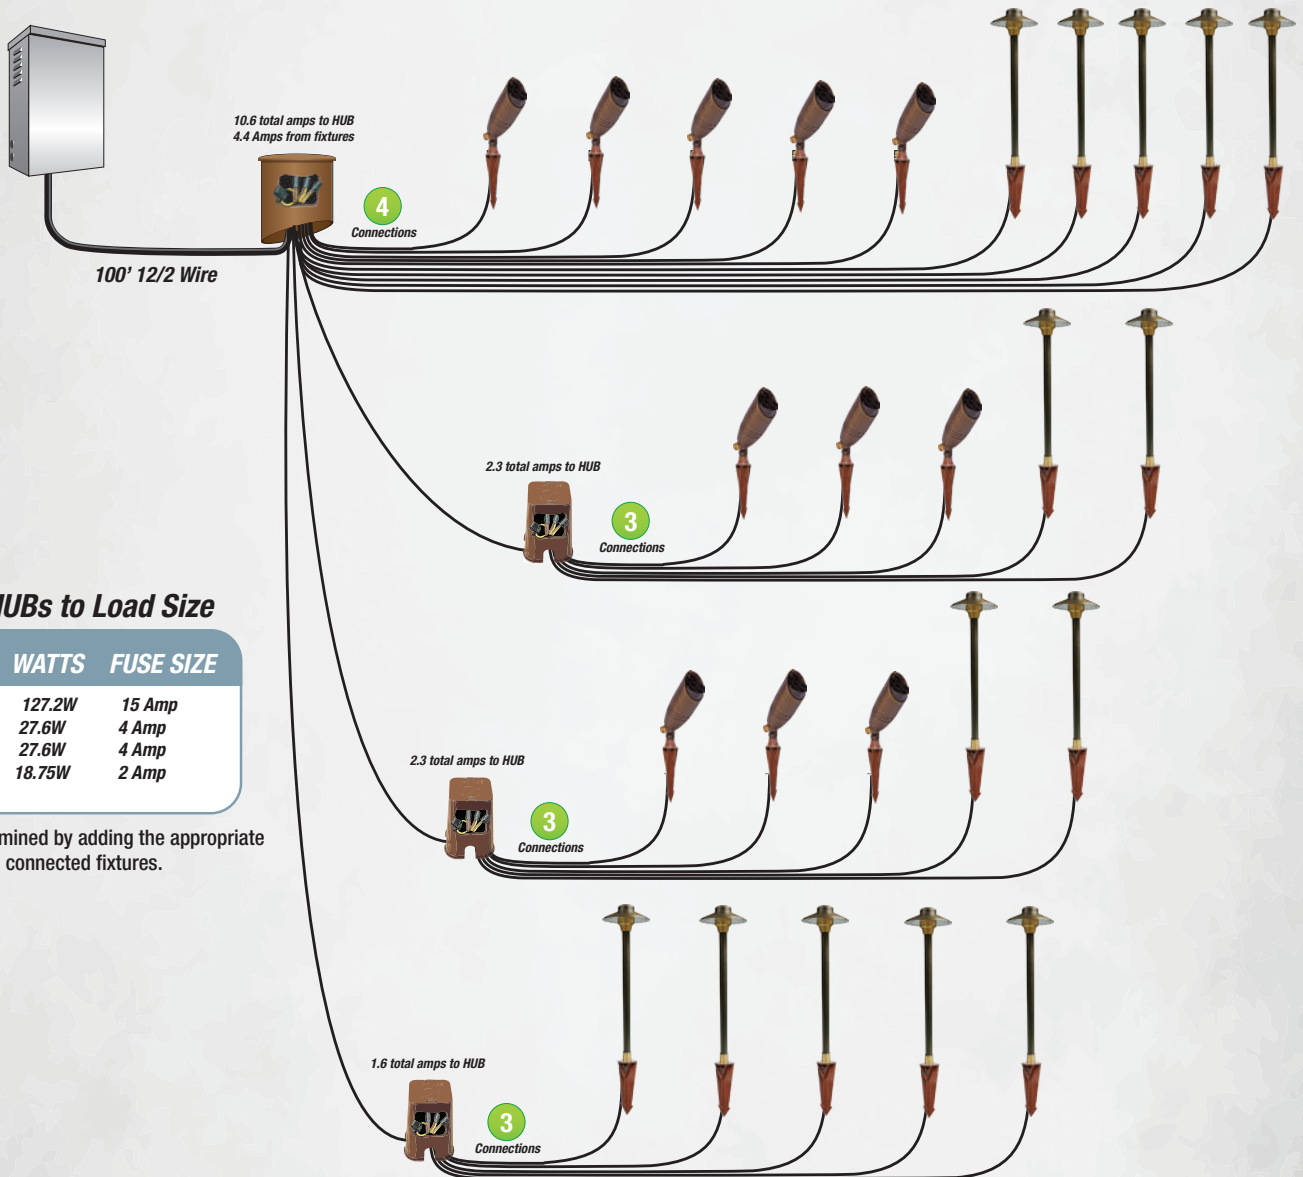

Take It To The Next Level!

The Intelli-HUB Method Advantages

- 18/2 - 25' wire lead on each fixture
- Secondary fuse for protection included at the HUB
- Only need to check voltage at the hub vs. every fixture
- One point of connection per home run
- Connections protected in direct burial enclosure
- Equal voltage to every lamp

25 Fixture System Example

Most Unique Lighting Systems® fixtures come standard with a 25' wire lead.

Fuse HUBs to Load Size

HUB	WATTS	FUSE SIZE
Intelli-HUB	127.2W	15 Amp
SAT HUB 1	27.6W	4 Amp
SAT HUB 2	27.6W	4 Amp
SAT HUB 3	18.75W	2 Amp

Load is determined by adding the appropriate draw from all connected fixtures.

The "T" Method

The Daisy Chain Method

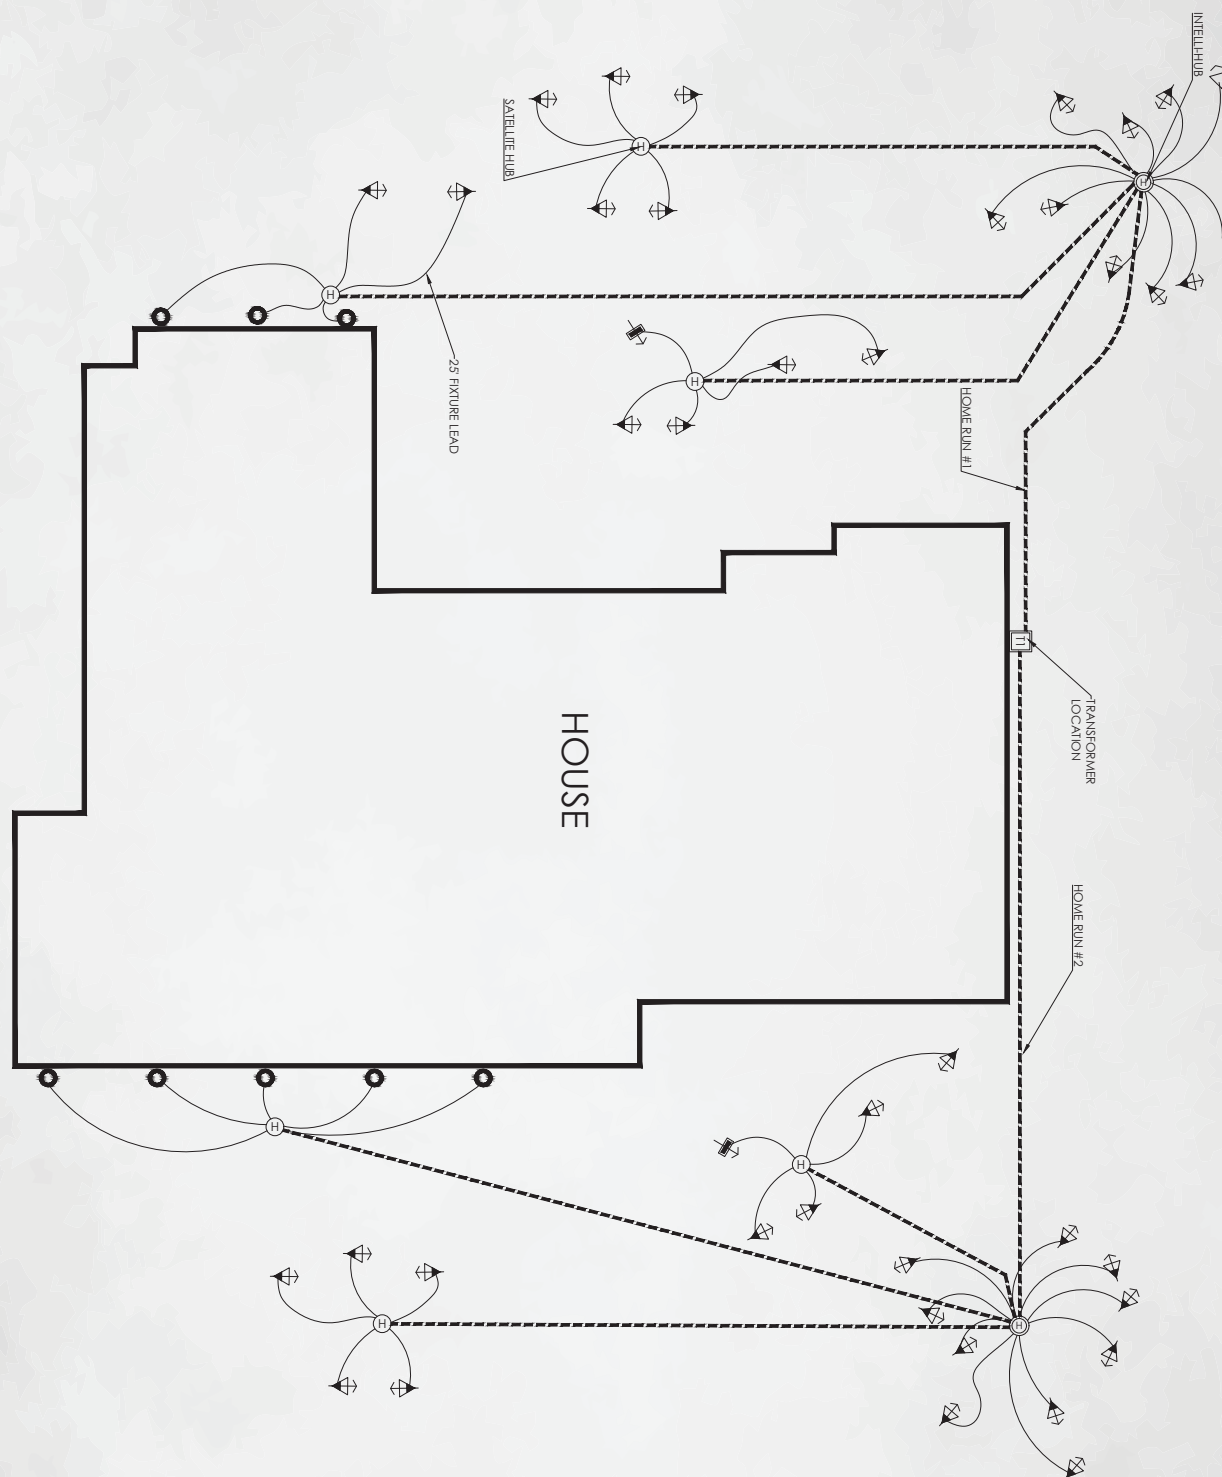

The Loop Method

34 CONNECTIONS + NOT FUSED + MORE TIME = PRONE TO FAILURE

50 CONNECTIONS + NOT FUSED + MORE TIME = PRONE TO FAILURE

50 CONNECTIONS + NOT FUSED + MORE TIME = PRONE TO FAILURE

Intelli-HUB Wiring Method Design

Shown here is an actual Intelli-HUB wiring design. As you can see, the Intelli-HUB wiring method not only reduces the number of connections in the field, it is the safest way to install low voltage lighting. By fusing HUBs in the field, total system failures are greatly reduced. Allowing you to enjoy your system for years without worry of a short or a redesign down the road. A few advantages of the HUB wiring method:

- Utilizing the same home run, you can branch off from the larger Intelli-HUB to secondary HUBs known as a Satellite HUBs
- All HUB/fixture connections are fused to the load for safety
- All connections are in easy to find locations
 - Fused for **SAFETY**
 - Easy to check voltage
 - Easily trouble shoot

Why A HUB System?

Wire connections are the weakest point of any low voltage installation and are susceptible to wicking and water infiltration. Utilizing the HUB installation method will reduce the number of connections by up to 80% versus standard wiring methods. This means less maintenance, less lamp outages and easier troubleshooting. In addition the HUB method utilizes less wire and saves money.

- Each HUB acts as a central location for connections, taking the guess work out of troubleshooting
- Protect connections from moisture to minimize wicking and corrosion
- Reduce the number of connection points, wire and labor
- Distribute proper voltage evenly to every fixture
- Flexibility in fixture location and future expansion

HUB Housing

FEATURES & BENEFITS

- Brown ABS housing easily hides in the landscape
- Impact resistant so it holds up to the abuse of landscaping
- Snap-in lid makes access for expansion or maintenance easy
- Compact size is perfect for planters

Fuse Link

FEATURES & BENEFITS

- 20 Amp rated gives you the ability to fuse to the load
- Water resistant design protects in damp locations
- 8" 10AWG wire leads
- Protects wire from damage that may occur in the yard

Direct Burial Connections

FEATURES & BENEFITS

- Solid brass barrel lugs for lasting durable connections
- Pre-greased black wire caps to protect connections from moisture
- Solid mechanical connections ensures the life and performance of the HUB

Enough Power To Do The Job

Unique Lighting Systems' highest commitment is to set the standard for manufacturing, innovation and quality products. All Unique Lighting Systems transformers are engineered with solid copper core windings and the highest quality materials. Our high quality materials and precision grain-oriented steel laminations combine for an energy efficient product with very low no-load amps. We utilize dual layer insulation between the primary and secondary winding. As an industry leader, we specify all the materials including laminations, copper wire, surface area of the wire and more.

Benefits of the Unique Lighting Systems Transformer

- Solid copper core windings made of the highest quality materials*
- Limited Lifetime Warranty on Pro-Force and Direct Burial models
- Energy efficient with minimal no-load amps
- Insulated primary and secondary
- Precision grain-oriented steel laminations are interlocked and varnish impregnated

* Not including 60 Watt LED model.

Specifications & Features

Core

Engineered single core design with precision grain-oriented steel laminations. High temperature glass-impregnated nylon bobbin and solid copper mag wire. To ensure robust construction, each output tap is soldered to the mag wire for optimum connectivity.

Construction

304 stainless steel (complies with NEMA 3R).

Primary Protection

One 25A breaker for 300W
Two 25A breakers for 600W

Power Cord

Unit must be hardwired.

Electrical Requirements

Available power ratings 300 and 600 Watts.
Primary voltage is 120 volts, secondary voltage varies from 12V-24V outputs.

Output Terminal

Tinned 6061-T6 aluminum lug strip with 3mm hex set screw for a positive torque connection. Includes 3mm hex key tool with every transformer.

Auto LED Work Light

LED work light will illuminate when the transformer door is open, and turn off when door is closed, allowing easy installation in low-light conditions.

Finish

Stainless Steel finish is standard. Unique Lighting Systems' Weathered Brass finish is a "living finish" and will naturally patina and change over time.

Warranty

Limited lifetime warranty against manufacturer's defects.

Dimensions

Height: 13.5" (342.9 mm)
Width: 8" (203.2 mm)
Depth: 8" (203.2 mm)

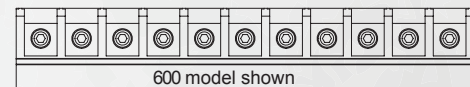

Standard Finish
SS - Stainless Steel

Standard Finish
WB - Weathered Brass

Tinned 6061-T6 aluminum lug with 3mm set screws

Specifications & Features

Core

Engineered single core design with precision grain-oriented steel laminations. High temperature glass-impregnated nylon bobbin and solid copper mag wire. To ensure robust construction, each output tap is soldered to the mag wire for optimum connectivity.

Construction

304 stainless steel (complies with NEMA 3R).

Secondary Protection

LED safe 15 AMP breaker on 150W

LED safe 25 AMP breaker on 300W

Power Cord

16/3 SJTW power cord. Six feet in length.

Electrical Requirements

Available power ratings 150 and 300 Watts. Primary voltage is 120 volts, secondary voltage varies from 12V-15V output.

Astronomical Timer Ready

Output Terminal

Tinned 6061-T6 aluminum lug strip with 3mm hex set screw for a positive torque connection. Includes 3mm hex key tool with every lugged transformer.

Finish

Stainless Steel finish is standard.

Warranty

10 year limited warranty against manufacturer's defects.

Dimensions

Height: 14.25" (361.95 mm)

Width: 4.75" (120.65 mm)

Inspira™ Fixtures

Inspira are the ideal outdoor lighting fixtures for one-of-a-kind, custom lighting designs and unparalleled lighting portrait possibilities.

Benefits of Inspira™

- **Premium Grade Fixtures**

Inspira fixtures are constructed of solid brass and composite material to provide the ultimate durability. Fixtures come with a 25' wire lead, brass threaded, slotted stake and carry a limited lifetime warranty.

- **Cloud Connected Through SMRTscape™**

Color customization, beam angle control, and output brightness are all managed through SMRTscape from your mobile device or PC.

- **Select Between CCT and RGB Color**

Low voltage lighting innovation integrates CCT and RGB illumination in one.

- **Complete Beam Angle Control**

Inspira's exclusive, cloud enabled, liquid crystal Calibrated Lens Control, fully adjusts beam angle and spread with no mechanical parts, to provide ultimate lighting composition control and exquisitely highlight landscapes or architectural features with ease.

All Inspira fixtures are premium grade

Pathway lighting

- Use the SMRTscape app to create custom lighting themes for holidays, celebrations, special occasions, or mood setting
- Use your mobile device to control and highlight specific areas of a property or landscape
- Automatically return to everyday lighting themes

Odyssey Series Fixtures

The pride of Unique Lighting Systems®, Odyssey Series is the result of years of research, development and determination to create the most elite lighting fixtures available. Experience the marriage of beauty and durability as each Odyssey fixture is built from solid brass and designed to last a lifetime. Odyssey fixtures come with a standard 25' wire lead, brass-threaded slotted stake, and a full array of designer lenses and glare control devices. Coupled with Unique Lighting Systems' limited lifetime warranty, the Odyssey line is one of the most dependable and beautiful lighting systems on the market.

Benefits of Odyssey Series

- Premium grade fixtures
- Solid brass construction
- Designer lenses
- 25' wire leads
- Brass-threaded slotted stakes
- Limited lifetime warranty

All Odyssey fixtures are premium grade

Pulsar™ • Up Light • Odyssey Series

Specifications & Features

- Solid cast brass construction
- Machined brass thumb screw
- Specification grade, beryllium copper socket
- Premium grade direct burial cable
- AMC - Anti-Moisture Connections
- Complete lens set included
- MR16 8W max. LED lamp / 50W max. halogen
- Brass-threaded slotted stake included
- 25' wire lead
- Weathered brass finish standard
- Limited lifetime warranty

Knights Series Fixtures

Add a touch of elegance to your outdoor atmosphere with the Knights Line from Unique Lighting Systems®. Made from high quality brass and copper, the Knights line is designed to withstand the test of time and look beautiful while doing it. By fabricating the fixtures from brass and copper, Unique Lighting Systems has created a long-lasting product that develops an attractive appearance naturally over time. The complex structure of brass and copper changes when exposed to outdoor conditions, bathing the fixture's exterior with a naturally aged look.

Benefits of Knights Series

- Contractor grade fixtures
- Solid brass or copper
- 25' wire leads
- 15 year warranty

Elements Series Fixtures

The Elements™ Series was created for the discerning customer who wants the latest in high-quality lighting at a great value. True to its name, the Elements Series offers a unique blend of materials and an authentic styling to match the natural environment in which it is placed. With installation productivity in mind, most fixtures come standard with a 15 foot wire lead and a one foot *FLEX™* Auxiliary lead. This allows for installation ease and flexibility for future expansion.

Benefits of Elements Series

- Consumer grade fixtures
- A360 Alloy or brass
- *FLEX™* Auxiliary leads for future expansion
- 10 year warranty

Outdoor Living

Outdoor living means just that - living, eating and relaxing outdoors in the fresh air. Indoor and outdoor styles come together to create truly amazing spaces. There is nothing like having architectural elements that allow your indoor living to expand and blend with the outdoor space. Creating a comfortable and well-appointed outdoor living room is considered the next level of luxury in home design. Incorporating relaxing, dining, cooking, and play into the growing outdoor space opens up the scope of outdoor living at home and increases the usable square footage of your house.

Cloud Based Landscape Control

Lighting system control from a mobile device, tablet, web browser or computer virtually anywhere, anytime, regardless of how those devices are connected to the internet (Wi-Fi, Ethernet or Cellular). SMRT Logic® uses a secure Internet Gateway, a dedicated website and an app on your smart device to create an integrated lighting control system. This innovative approach provides complete control of one or more lighting systems from any web browser, computer, iOS® or Android™ device without the need to be “on site”. Using the SMRTscape™ app (FREE from iTunes and Google Play) you can control outdoor lighting scenes, easily perform maintenance, set the mood for special occasions, operate security and seasonal lighting, control ponds, fountains and more! SMRT Logic has the ability to control irrigation when used with popular irrigation controllers from both Toro® and Irritrol®.

*iOS is a registered trademark of Cisco in the U.S. and other countries. iTunes is a registered trademark of Apple, Inc. Android and Google Play are trademark of Google, Inc. App Store is a service mark of Apple, Inc., registered in the U.S. and other countries.

Cloud Based Landscape Control

Cloud based landscape control anytime, anywhere. Use SMRT Logic® with the SMRTSCAPE™ mobile app or website to control irrigation, lighting, fountains, security gates, and more...

Simple

Simple Plug & Play installation allows the SMRT Logic Gateway to connect to the internet on its own with no need for network permissions or passwords.

Connected

Powered by a proprietary radio signal, SMRT Logic communicates to your landscape systems with a level of consistency, distance, and security not seen across competing Wi-Fi or other wireless platforms.

Secure

Industry standard encryption coupled with our proprietary radio technology provide secure access and communication between your landscape systems and SMRT Logic.

Compatible

SMRT Logic is backward compatible with select Toro®, Irritrol® and existing Unique Lighting Systems® installations.

Why SMRT Logic® ?

- Wireless control of up to four scenes
- Conveniently used with any iOS® or Android™ mobile device
- Up to 250 different transformers or devices for each control scene
- Easily retrofits into existing lighting installations
- Compatible with any cord connected 120V device
- Astronomical timing – auto adjusts dusk and dawn times by your location and seasonal changes

Homeowner Benefits

- Create different ambience for different occasions
- Control pathway lighting for easy nighttime entry
- Turn on security lighting at the perimeter of the property at the press of a button
- Automate outdoor living spaces - control fountains, irrigation controllers, seasonal lighting and other outdoor elements
- Compatible Amazon® Alexa® and Google Home

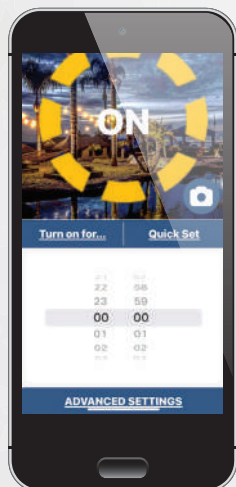

SMRT-T Internet Gateway

- Easy zip code entry for location
- Automatically adjusts for Daylight Savings Time
- Firmware upgradable
- Power outage safe – you won't lose your programming
- Secure Internet Gateway - No Wi-Fi Limitations
- Communicates with LPCU-A via proven and dependable RF signal

LPCU-A Power Control Unit

- Compatible with any cord connected 120V device
- Up to 1000 foot line of sight communication range
- Each LPCU-A also functions as a repeater, assisting with long-range installations
- The LPCU-A comes equipped with an antenna for added distance or an extra boost for your wireless signal
- Repeater feature creates a mesh network on larger installs

Mobile Device

- FREE iOS®* or Android™* App (App Store and Google Play™)
- Control multiple lighting systems from more than one device
- Compatible with existing SMRT Logic® installations
- Use for lighting, ponds, fountains & more...
- Robust, reliable and upgradable

For non-cloud based installations please refer to price list for programming module (LPRO) and handheld remote (LRMT).

***FLEX GOLD™* Series LED Lamps**

Whether you are subtly illuminating an elegant pathway for a desired effect, or reaching for the tree top, *FLEX GOLD™* and *FLEX GOLD™* VIVID Series LED lamps provide the solution.

With our wide range of wattages and beam spreads the *FLEX GOLD™* VIVID Series can fully illuminate any project. Unique Lighting Systems offers the highest wattage lamp in the industry, so nothing is out of reach.

Benefits of *FLEX GOLD™* Series

- Drop-in LED lamps
- Wide range of lamps ranging from Micro T3 to PAR36 lamps
- *FLEX GOLD™* VIVID Series color changing technology
- *FLEX GOLD™* VIVID Series App puts adjustments at your fingertips

Energy Efficiency & Savings

Are Your LED Lamps Efficient?

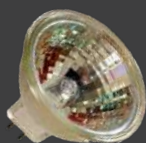

The effectiveness of LED products has steadily improved since their introduction as a source for general illumination. This trend is expected to continue thanks to new materials and better manufacturing processes. Currently, the efficacy of LED lamps compares very favorably to conventional light sources. Many integrated LED lamps and LED luminaires have efficacies that are comparable to their traditional counterparts. However, the variability in LED products are changing rapidly. More importantly, efficacy should not be the only factor when comparing products. Other performance characteristics, such as color quality and lumen intensity distribution must be considered in making a decision.

By The Numbers

What is the difference between *FLEX GOLD™* Series LEDs and standard halogen lamps?

"Widespread use of LED lighting has the greatest potential impact on energy savings in the United States."

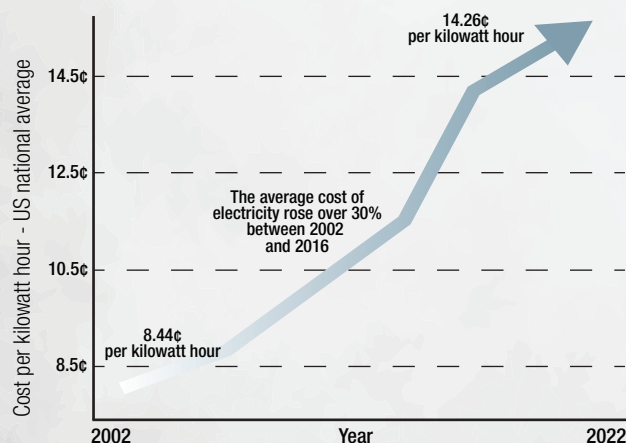

- LED Section on Energy Savings
U.S. Department of Energy, Energy.gov

Lamp Wattage:	35 W Halogen	5 Watt <i>FLEX GOLD™</i> LED
Lifespan of Lamp:	4,000 hrs.	40,000 hrs.
Annual Electrical Cost:	\$19.32 per year	\$2.76 per year
Lifespan when used for 8 hours a day, 7 days a week	1 year 4 months 13 days	13 years 8 months 11 days
Cost of replacements each year:	\$2.92	\$0.00
Total annual cost:	\$22.24 per year	\$ 2.76 per year
Total cost (after 13 years 8 months, 11 days)	\$308	\$62

Total savings /w LED fixture (ROI): \$308 - \$62 = \$246 Total Savings

Rising Cost Of Electricity

Data obtained from U.S. Department of Energy, Energy.gov

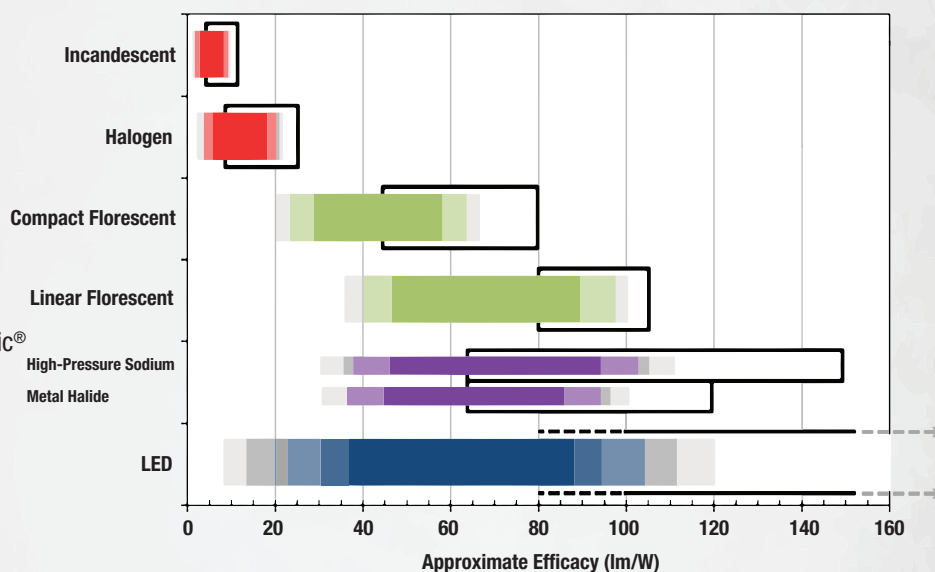

Longer Life Lamps

Most LED lamps will last up to 10 times longer than standard halogen lamps. With an average lifespan of 40,000+ hours, converting to LEDs will not only increase energy savings, it will significantly reduce material and labor costs by not having to continuously replace frequently burned out halogen bulbs. Retrofit your existing job and create instant energy savings. *FLEX GOLD™* Series LEDs are up to 85% more efficient than halogen, resulting in considerable energy savings over the lifespan of the lamp.

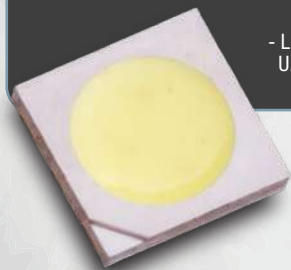

Efficacy Versus Energy Use

Efficacy is related to energy efficiency, but it cannot be used to establish energy use. Energy use is the power draw over time, and is typically reported in units of kilowatt-hours (kWh). A less efficacious product may in fact use less energy if it is operated for fewer hours. Control systems such as Unique Lighting Systems' SMRT Logic® system can be an important tool for realizing energy savings over time.

"LED is a highly energy efficient lighting technology, and has the potential to fundamentally change the future of lighting in the United States. Residential LEDs use at least 75% less energy, and last 25 times longer, than incandescent lighting."

- LED Section on Energy Savings
U.S. Department of Energy, Energy.gov

It would take 10 halogen lamps to equal the lifespan of 1 *FLEX GOLD™* Series LED lamp.

Why *FLEX GOLD™* Series LED Lamps?

- 85% less energy usage than halogen
- 13+ year lifespan
- Retrofit for instant savings
- Sustainable
- Thoroughly tested in Unique Lighting Systems fixtures
- Cool to the touch
- Eco-friendly
- Do not attract bugs
- Reduce your carbon footprint

**PAR36 - 5W, 7W & 13W**

- 5 Watt - Up to 320 Lumen, 10-15V
- 7 Watt - Up to 480 Lumen, 10-15V
- 13 Watt - Up to 840 Lumen, 10-15V
- 40,000 hour rated life
- Rated for outdoor use in an enclosed fixture
- Operating temperature -4° F to 122° F
- Available in Warm White, White and Cool White
- Flood = 32°
- 5 year warranty

**MR16 - 3W, 4W, 5W & 8W**

- 3 Watt - Up to 200 Lumen, 10-15V
- 4 Watt - Up to 280 Lumen, 10-15V
- 5 Watt - Up to 430 Lumen, 10-15V
- 8 Watt - Up to 600 Lumen, 10-15V
- 40,000 hour rated life
- Rated for outdoor use in an enclosed fixture
- Operating temperature -4° F to 122° F
- Available in Warm White, White and Cool White
- Spot = 20° Flood = 40° Wide Flood = 60°
- 5 year warranty

**MR16 - 4W ECO**

- 4 Watt - Up to 280 Lumen, 10-15V
- 40,000 hour rated life
- Rated for outdoor use in an enclosed fixture
- Operating temperature -4° F to 122° F
- Available in Warm White
- Flood = 40°
- 3 year warranty

**MR11 - 2W**

- 2 Watt - Up to 110 Lumen, 10-15V
- 40,000 hour rated life
- Rated for outdoor use in enclosed fixture
- Input voltage 10-15V
- Operating temperature -4°F to 122°F
- Available in Warm White
- Flood = 40°
- 5 year warranty

**T3 - 1W & 2W**

- 1 Watt - Up to 100 Lumen
- 2 Watt - Up to 250 Lumen
- 20,000 hour rated life
- Input voltage 10-15V
- Available in Warm White, White and Cool White
- 360° distribution of light
- 2 year warranty

**T3 - WR - 2W**

- Water Resistant
- 2 Watt - Up to 250 Lumen
- 40,000 hour rated life
- IP65 rated
- Dimmable
- Available for use in open or enclosed fixtures
- Input voltage 10-15V
- Available in Warm White and White
- 360° distribution of light
- 5 year warranty

**Micro G4 - 1W**

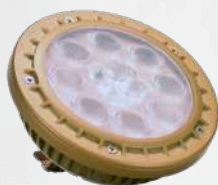

- 1 Watt - Up to 110 Lumen
- 20,000 hour rated life
- Input voltage 10-15V
- Available in Warm White and White
- 360° distribution of light
- 2 year warranty

MR16 - 5W RGBW

- RGB - 5 Watt dimmable from 10 to 420 lumens
- 40,000 hour rated life
- Wireless, app controlled
- Rated for outdoor use in an enclosed fixture
- Operating temperature -4° F to 122° F
- RGB - 2700K / Red/Green/Blue adjustability
- RGB - 3000K / Red/Green/Blue adjustability
- Flood = 40°
- 5 year warranty

PAR36 - 10W RGBW

- 10 Watt - dimmable from 10 to 800 lumens
- 40,000 hour rated life
- Wireless, app controlled
- Rated for outdoor use in an enclosed fixture
- Operating temperature -4° F to 122° F
- RGB - 2700K / Red/Green/Blue adjustability
- RGB - 3000K / Red/Green/Blue adjustability
- Spot = 20°, Flood = 40° & Wide Flood = 60°
- 5 year warranty

VIVID Range Extender (VIVID-R)

- Communication range of up to 230 ft. (line-of-sight)
- Wireless, app controlled
- IP65 Rated
- 32°F - 113°F, 5-80% RH Operating Environment
- Polycarbonate housing
- 10' wire lead

T3 - 2W RGBW

- 2 Watt - dimmable from 10 to 120 lumens
- 40,000 hour rated life
- Wireless, app controlled
- Rated for outdoor use in an enclosed fixture
- RGB - 2700K / Red/Green/Blue adjustability
- RGB - 3000K / Red/Green/Blue adjustability
- 3 year warranty

Beam Spreads

Are You Using The Right Beam Spread?

FLEX GOLD™ LED lamps are offered with 20° to 60° and wider beam widths or view angles. The total volume of light between a 20 degree view angle and 60 degree view angle LED light bulb is the same but, the concentration of light with narrower 20 degree view angle LED bulbs makes them seem brighter because you see all of it in a smaller space. The wider view angle LED bulbs will appear less bright because the same light volume has been spread wide. There is minimal light spread outside of the stated view angle.

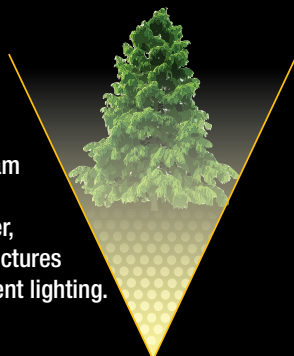

Thinner, longer beam of light ideal for illuminating taller, thinner structures or for focusing light onto certain areas.

20°
Beam Spread

Medium width beam of light ideal for illuminating shorter, medium sized structures or for general accent lighting.

40°
Beam Spread

Wider, shorter beam of light ideal for illuminating wide trees or structures or for focusing light onto certain areas for a wall washing effect.

60°
Beam Spread

High Temp Silicone Grease

Ohm's Law

Amps = Watts ÷ Volts

Watts = Volts x Amps

Volt Amps

Calculate Volt Amps with this formula:

Lamp Watts _____ X 1.5 = _____ VA

Why do Volt Amps matter? Volt Amps are the blend of LED chips and driver draw. This value represents true lamp watt draw.

Voltage Drop

3 amps or 36 VA will drop 1 volt over 100 feet on 12 gauge wire

Light Levels

This level of lighting is used to enhance flower beds and also safely illuminate pathways. Area lights are often staggered and alternating from one side to another when used on a pathway.

This level is commonly used in wall washing. Illuminating an entire surface evenly to create a beautiful and subtle glow. Illuminating the front face of a home evenly provides an elegant appeal.

Architectural and landscape elements become visually dramatic features when illuminated from below with light level 3. Up lighting is the most common technique used to accent key focal points in the landscape and to create shadows on walls.

Critical Three

1. Test Primary Amperage:

A. Use a true RMS Amp Clamp to measure 120 VAC amperage.

B. 120 VAC Amp table:

150W.....	1.5 Amps
200W.....	1.7 Amps
300W.....	2.5 Amps
360W.....	3.0 Amps
500W.....	4.2 Amps
600W.....	5.0 Amps
840W.....	7.0 Amps
1120W.....	9.3 Amps

2. Test Secondary Amperage:

A. Use a true RMS Amp Clamp to measure 12 VAC amperage.

B. NEC states not to exceed 80% of rated electrical rating.

C. Wire table:

Wire Size	Max. Amps	Max. VA @80%
14 AWG	16 Amp	192
12 AWG	20 Amp	240
10 AWG	24 Amp	288

3. Test Secondary Voltage at HUB:

A. Test and adjust voltage at the transformer until point of connection (POC) voltage is at 12 VAC +/- .5 VAC.

Designing The Job Right

1. Test Secondary Amperage:

A. Use transformer table to cross reference transformer size needed.

B. Project total VA should NOT exceed 80% of the transformer max. amperage rating.

2. Calculate Voltage Drop for long runs and high-load HUBs

A. Start with the longest run and highest VA run.

Example: Longest run is 200' and has 105 VA. Voltage drop = 6, 12 VAC + 6V = 18V. The smallest transformer with an 18V tap is 840W.

Our Commitment

Unique Lighting Systems' highest commitment is to set the standard for manufacturing innovative and quality products. This commitment is evident through our detailed inspection processes and extensive field testing. From the initial design process of each product, to the final assembly of each custom-made individual part, our manufacturing process accomplishes the highest level of performance and durability carried through to final delivery to the end user. Durable construction and beautiful styling make Unique Lighting Systems fixtures the ideal solution for any residential or commercial application. Unique Lighting Systems already holds numerous product patents and we are constantly developing innovative ideas to help expand the lighting industry.

We reserve the right to improve our products and make changes in the specifications and designs without notice and without incurring obligation. Products depicted in this brochure are for demonstration purposes only. Actual products offered for sale may vary in design and features.

The Unique Lighting Systems Promise • A Full Warranty

Unique Lighting Systems® products have been manufactured to the highest standards of quality and workmanship. All Unique Lighting Systems products are warrantied against manufacturer's defects as listed below.

Transformers – Limited Lifetime Warranty*

Inspira - Limited Lifetime Warranty on fixture hardware, 5-Year Warranty on LED Light Modules

Odyssey Series – Limited Lifetime Warranty

Knights Series – 15-Year Warranty**

Elements Series - 10-Year Warranty

LED Lamps - Please refer to website

For additional details visit www.uniquelighting.com

*LED Series transformers carry a 10 year limited warranty against manufacturer's defects.

**Certain Knights models carry a limited lifetime warranty, please refer to product pages for specific product warranty information.
